

SCIENCE DEPARTMENT

Applemore College has a dynamic and enthusiastic Science Department. We have a range of specialist facilities both inside and outside of the classroom that enables our students to be fully immersed in the subject, further developing their interest.

Our strong community and business links include the Life Lab project in conjunction with Southampton University and our highly successful STEM Challenge days held in partnership with Exxon Mobil.

As a department we seek to expand the horizons of all students at Applemore. Science Club is available to all year groups during lunchtimes and enables students to complete experiments that are not included in the learning curriculum. Eco-schools Club also happens after school - students have sorted plastic waste from our local environment, gardened in the school quad and joined national campaigns for reducing energy use and they have taken part in Clean Air Day.

The Science Department is proud to have a team of specialist teachers who have a passion for science and are ambitious for all. We have an overwhelming desire to share our knowledge and inspire the future generations of scientists. We are proud that so many of our students go on to take a range of sciences at A level and beyond.
