

MATHS DEPARTMENT

Mathematics lessons at Applemore provide a variety of challenging activities designed to motivate and engage enquiring minds. Our main aim is to develop problem-solving skills and independent learners and we do that whilst incorporating concepts from the Edexcel GCSE Mathematics course as well as the FMSQ in additional maths for our top mathematicians.

In year 10 we spend some time looking at the maths we all need in everyday life, developing the functional skills in our students and preparing them for life after school.

Our year 7 are benefiting from a maths mastery approach which teaches to a greater depth and increased fluency in their understanding of maths.

At home, we encourage parents and carers to consolidate the work completed in lessons to ensure it is fully embedded. This will enable students to make excellent progress and feel completely confident in the new skills they have acquired.
